SCOPE

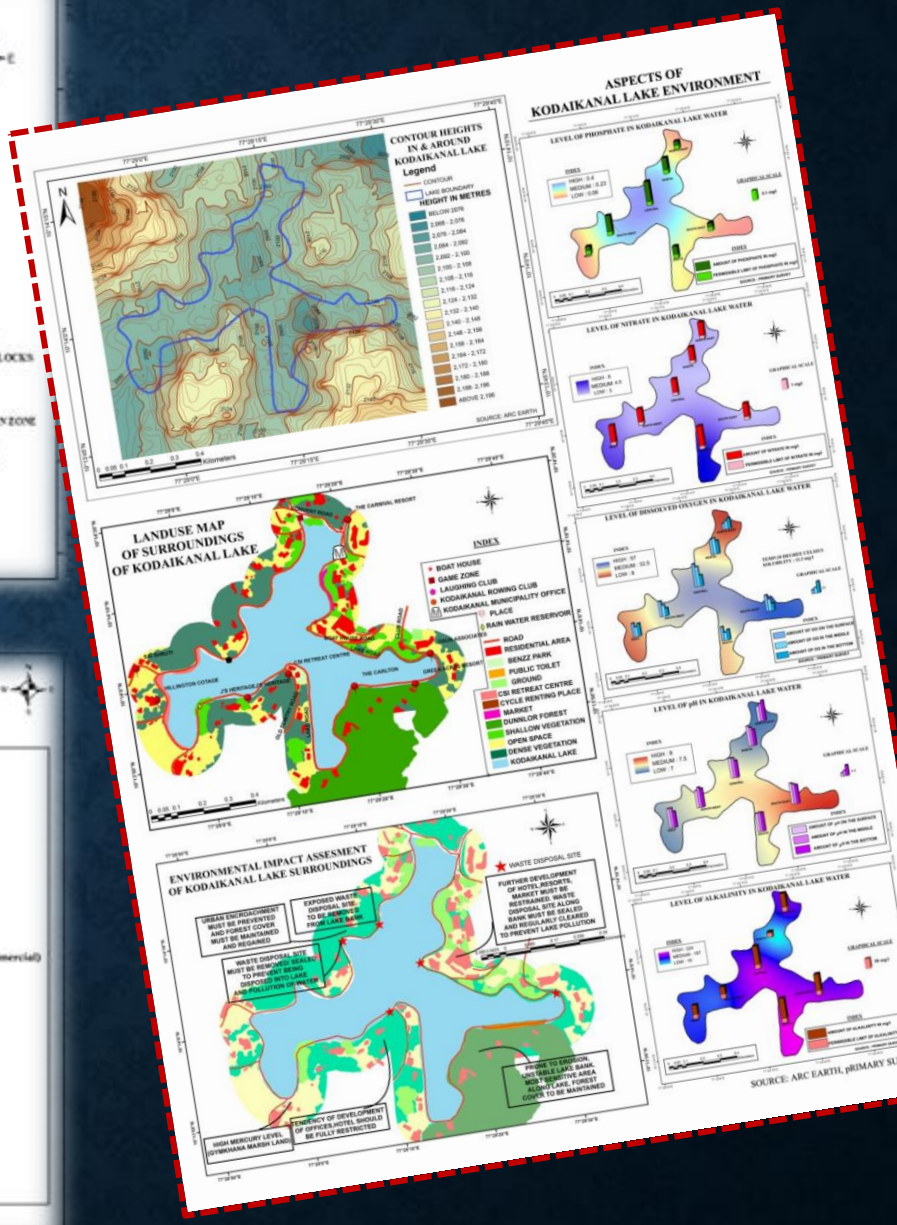

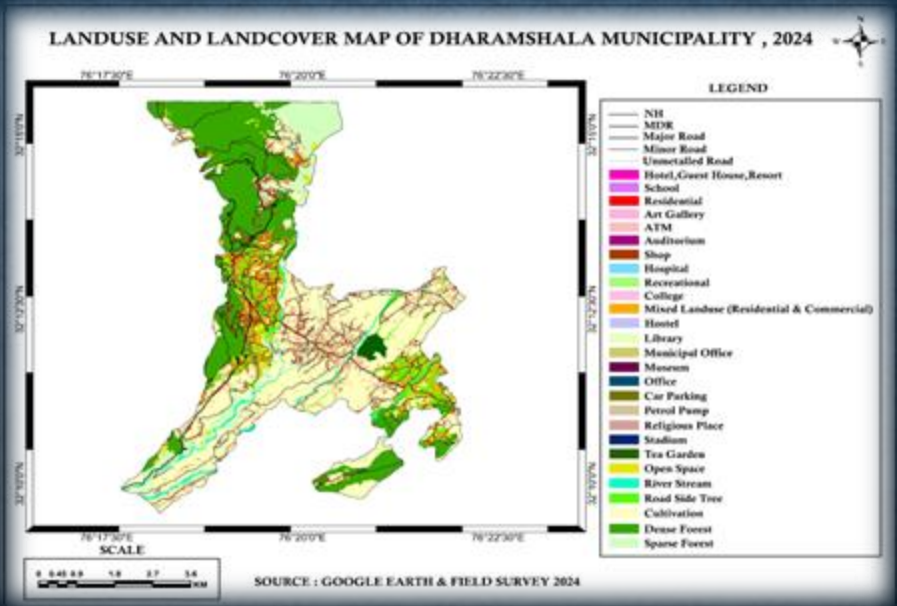

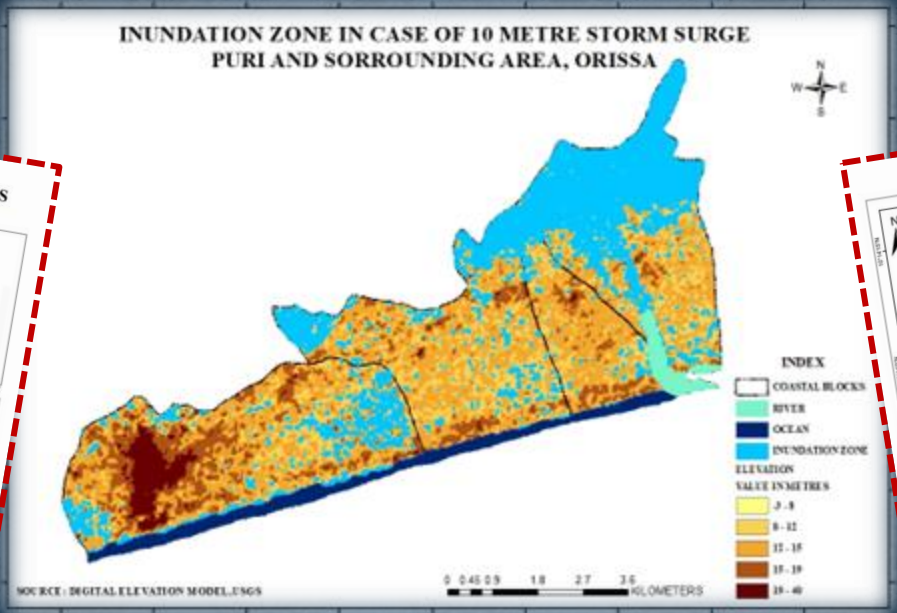

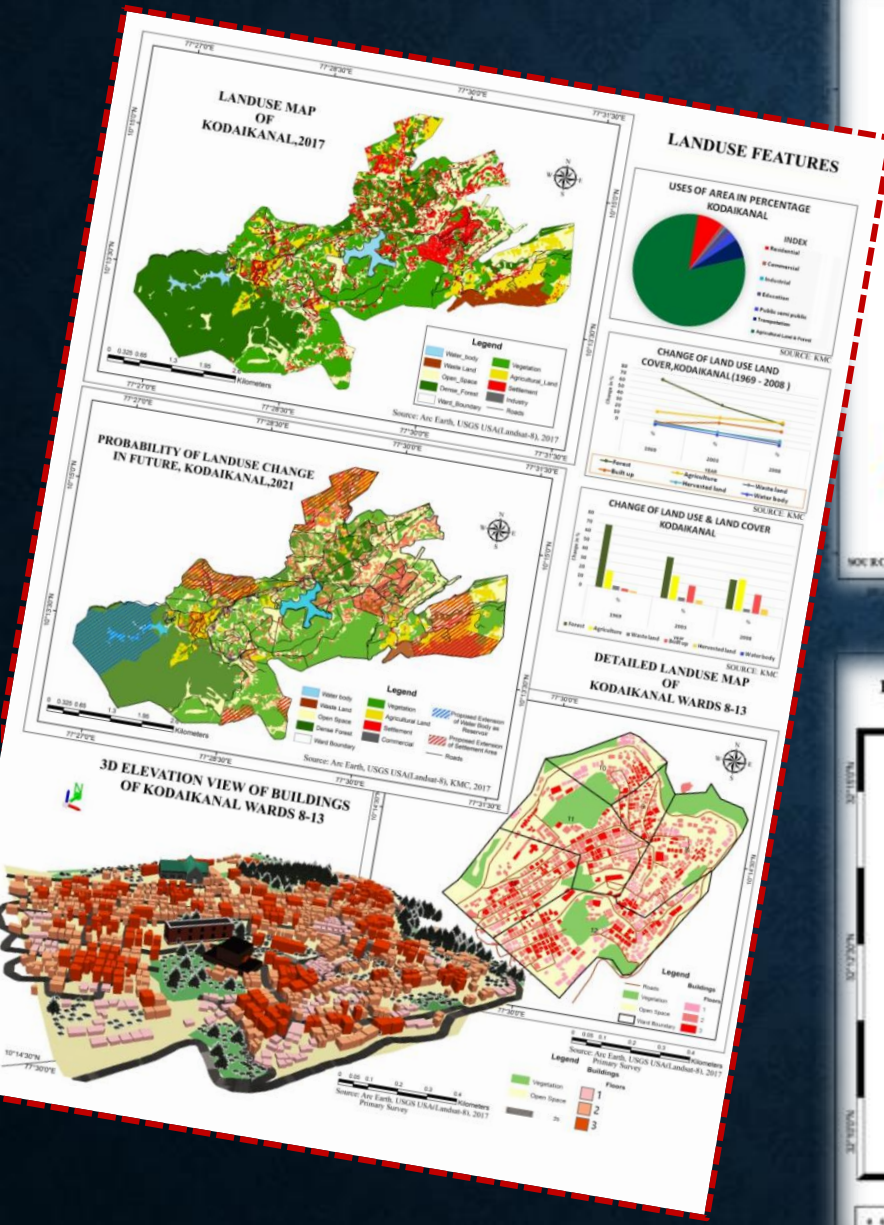

A degree in Geography provides a qualification, widely recognized as an appropriate starting point in various sectors. Teaching and academic work, including employment in schools and with higher education, in colleges and universities are common career options. Graduates are increasingly entering in specific fields like urban and resource planning, environmental management, disaster management, human development, R&D, travel and tourism, etc. Those soundly trained in GIS and Remote Sensing have bright careers in government organizations, NGOs and in a wide range of IT industries. Students can also opt for government services like WBCS, IAS etc. The discipline has directly shifted to being vocational like other sciences. Its rapidly diversifying avenues constantly augment the subject's attractions.
